

# Evo'lution Electric Art + Photo

**FINE ART & PHOTOS IN A WHOLE NEW LIGHT!**

## PRESS RELEASE

**A**rt and your favorite photos can now be appreciated in a whole new light, thanks to a new award winning hi-tech light-bulb invented by LaserVisions Technology Inc. of Kelowna, Canada, recipient of Product-of-the-Year for three straight years running from the Digital Printing Industry.

**T**hinner than a credit card in sizes as large as a bus shelter poster, as bright as a fluorescent sign box, Evo'lution Electric Art and Photo provides perfect homogenous light scattering, edge-to-edge, end-to-end without the hot and cold spots often associated with bulky florescent fixtures. Your favorite Art and Photos can now be backlit 24/7 at times when you'll appreciate it most. No more annoying Halogen lighting in your eyes because electroluminescent backlit Art and Photos incorporates gentle transmissive light, not bright reflective light. You'll have far greater control over color gamut, contrast and depth of field bringing your Art and Photos to life like you've never seen before (see attached examples).

**O**n some models, you can vary the look of the Art and Photos and mood of the room by adjusting illumination intensity *and* color with a small rheostat control cleverly hidden at the bottom of the picture frame. This is a World First for never before has Art and Photography looked this good on your wall or tabletop.

**E**vo'lution Electric Art and Photo represents a revolution in home decor. Choose your Art from the catalog at your favorite gallery and let them coordinate the printing and framing or call us directly toll free at 1-866-357-4338 and we will do everything for you. For the smaller sizes, you can use your own home printer and our special back-lit film to create dazzling output. You can choose any frame, any liner or matt, any print and in any size from 8" by 10" to 4' by 6'. Power consumption is from 1/3 of a penny per day and it will last for many, many years.
